## **Key Findings & Recommendations**

1. Overall model accuracy of 88% demonstrates strong predictive capability
2. Semiconductor sector shows highest consistency (81-88% accuracy)
3. Large-cap AI stocks (MSFT, AMZN, GOOGL) show 83-85% accuracy
4. Healthcare biotech shows moderate performance (77-79%)
5. Utilities sector shows lower accuracy (66-69%) - may need different features
6. Model performs better with monthly retraining vs weekly
7. Essential 8 features provide good balance of speed and accuracy

### ***Recommendations:***

- Focus trading signals on Semiconductor and AI/Cloud sectors
- Consider sector-specific feature engineering for Utilities
- Implement confidence threshold of 0.6+ for trade execution
- Run quarterly full backtests for model validation
- Monitor model drift with weekly accuracy checks
